Bachelor of Science in Physics / Sample Four-Year Program for Bachelor of Science in Physics / Applied Physics Concentration / Sample Four-Year Program for Applied Physics Concentration / Bachelor of Arts in Physics / Minor in Physics, Teaching Credential / Physics Courses

Programs offered

Bachelor of Science in Physics
Bachelor of Arts in Physics
Minor in Physics

Teaching Credential Preparation

Physics is the most basic of all the scientific disciplines. Ranging from the applied to the abstract, from the infinitesimal to the infinite, and from quarks to the cosmos, the study of physics seeks to explain all the complicated phenomena in the natural world by providing a description of these phenomena in terms of a few basic principles and laws.

In their most abstract work, physicists seek a unified mathematical description of the four known forces of nature (gravitation, electricity and magnetism, and the weak and strong nuclear forces). This quest for the "Theory of Everything" eluded Einstein, and is continued today by many physicists, including those who study superstring theory. A successful "Theory of Everything" will correctly predict the fundamental forces and the masses and interactions of the elementary particles from which all matter is formed.

Physicists also use their knowledge of fundamental principles to solve more concrete problems. Problems in understanding and utilizing the properties of semiconductors and other materials; in designing and building lasers, photonics and telecommunications devices; in nuclear physics and biophysics; and in designing and using instrumentation for astrophysics and cosmology are typically solved using the techniques of physics. Such applied physics problems often have a significant overlap with topics and techniques in engineering and computational physics. Indeed, many of the department's graduates are currently employed in engineering or computationally oriented positions.

The department offers a traditional, mathematically rigorous program leading to a B.S. in physics; a more applied curriculum leading to a BS in physics with a concentration in applied physics; and a flexible B.A. program with two advisory plans (Algebra & Trigonometry or Calculus). All programs stress fundamental concepts and techniques, offer an unusually rich laboratory experience and intensive use of computers, and require a "capstone" course as a culminating experience. Capstone projects may include experimental design, instructional design, or undergraduate research—personalized and unique opportunities to demonstrate the skills and knowledge acquired in the major.

The recently established Cerent Engineering Science Complex in Salazar Hall contains over \$4 million of newly donated and installed equipment that can be utilized by physics students in intermediate and advanced laboratory courses, and for experience in undergraduate research, design projects, or special studies. Interdisciplinary courses that are cross-listed with engineering sciences, biophysics or biochemistry also make use of these state-of-the-art laboratories, which include a scanning electron microscope, atomic force microscopes, a confocal microscope, and extensive instrumentation to support experiments in photonics and laser science, including experiments in laser-induced breakdown spectroscopy, laser-induced fluorescence spectroscopy, interferometry, holography, laser material processing, and micro-machining.

A substantial program in undergraduate astronomy includes many courses, listed in this catalog under Astronomy, which may be included in the two degree programs. The department operates a teaching observatory on the SSU campus, and a NASA-funded research observatory at a darker site in northern Sonoma County.

Bachelor of Science in Physics

The BS program is a thorough introduction to the principles of physics, providing a strong foundation for graduate study or industrial research. It is also intended for those students who wish to prepare for interdisciplinary studies on the graduate level in fields such as astronomy, atmospheric science, biophysics, environmental science, geophysics, materials science, and physical oceanography.

Degree Requirements	Units
General education	51
Major requirements (may include 5 units in GE)	46
Supporting courses (may include 4 units in GE)	26
Electives	1-10
Total units needed for graduation	124

Major Core Requirements

PHYS 114 Introduction to Physics I (may be applied to GE)	4
PHYS 116 Introductory Laboratory Experience (may be applied to GE)	1
PHYS 214 Introduction to Physics II	4
PHYS 216 Introductory Laboratory	1
PHYS 230 Electronics I	3
PHYS 231 Electronics I Laboratory	1
PHYS 314 Introduction to Physics III	4
PHYS 320 Analytical Mechanics	3
PHYS 325 Introduction to Mathematical Physics	3
PHYS 340 Light and Optics	3
PHYS 366 Intermediate Experimental Physics	3
PHYS 381 Computer Applications for Scientists	2
PHYS 430 Electricity and Magnetism	3
PHYS 450 Statistical Physics	2
PHYS 460 Quantum Physics	3
Total units in the major core	40

Major Electives (Advanced)

To complete the major, select 6 units from the list below. At least one of the courses chosen must be a *capstone course.

- ASTR 380 Astrophysics: Stars (3)
- ASTR 482 Advanced Observational Astronomy (2)
- *ASTR 492 Instructional Design Project (2)
- ASTR 495 Special Studies (1-4)
- *ASTR 497 Undergraduate Research in Astronomy (2)
- PHYS 413 Microprocessor Applications (3)

PHYS 413L Microprocessor Applications Laboratory (1)

PHYS 445 Photonics (3)

PHYS 466 Advanced Experimental Physics (3)

PHYS 475 Physics of Semiconductor Devices (3)

*PHYS 492 Instructional Design Project (2)

*PHYS 493 Senior Design Project (2)

PHYS 494 Physics Seminar (1)

PHYS 495 Special Studies (1-4)

*PHYS 497 Undergraduate Research in Physics (2)

Certain selected-topics courses, ASTR or PHYS 396, may be approved by the advisor.

Total units in the advanced electives: 6

Total units in the Major: 46

Required Supporting Courses

MATH 161 Calculus I (3 units may be applied in GE)	4
MATH 211 Calculus II	4
MATH 241 Calculus III	4
MATH 261 Calculus IV	4
CHEM 115AB,116AB General Chemistry (1 unit may be applied in GE)	10
Total units in supporting courses	26
Total units in the major and supporting courses (9 may be applied in GE)	72

Sample Four-Year Program for Bachelor of Science in Physics

The sequential nature of the physics curriculum necessitates an early start with major requirements and the distribution of general education courses over four years.

Freshman Year: 31 Units

Fall Semester (15 Units)

124

See your advisor to discuss acceptable physics electives and when they will be offered. Nine of the 51 units of GE are met by required courses listed here (3 each in areas B1, B3 and B4).

Applied Physics Concentration

Students may earn a BS in physics with a concentration in applied physics. This program is intended for those students who desire an emphasis on laboratory work. It provides a rigorous, yet slightly less theoretical course of study, and a greater selection of hands-on electives. It is a good choice for students who wish to continue their studies in graduate engineering programs, or who wish to work in industry in engineering or computationally oriented positions.

Degree Requirements	Units

See your advisor to discuss acceptable physics electives and when they will be offered. Nine of the 51 units of GE are met by required courses listed here, (3 each in areas B1, B3, and B4).

Bachelor of Arts in Physics

The B.A. Program allows considerable flexibility for the student who wishes to study physics as part of a liberal arts education. Two advisory plans are offered:

Bachelor of Arts in Physics with Advisory Plan C

This plan uses calculus. Students who choose this, the more popular B.A. advisory plan, have the prerequisites to take nearly all of the courses in the department. They find employment in scientific and engineering fields. Some go on to graduate school in interdisciplinary sciences. This degree program is appropriate for those who wish to earn a California teaching credential in science.

Degree Requirements	Units
Major requirements (may include 5-6 in GE)	34-38

Bachelor of Arts in Physics with Advisory Plan T

This plan uses algebra and trigonometry. Students may select from a wide range of upper-division courses, appropriate to careers as science or technical writers, scientific sales personnel, technicians, programmers or other technical specialists. There is opportunity to take courses that lead to careers in the health sciences or environmental fields. This degree program is appropriate for those who wish to earn a California multiple-subject teaching credential. Advisory Plan T is often taken as part of a double major.

120

**Area of concentration = 12 units in one other subject. Twelve of the 51 units of GE are met by required courses listed here (in areas A2, B1, B3, and B4).*

Minor in Physics

Completion of a minimum of 20 units in physics courses, including not more than one first course or more than one second course, constitutes a minor in physics. (First courses are PHYS 100, 210A, and 114 and their equivalents taught elsewhere. Second courses are PHYS 210B, 214, and their equivalents.) Interested students should consult with the advisor in the Department of Physics and Astronomy.

Teaching Credential Preparation

See the Teaching Credential Preparation in Science Courses section of this catalog, or contact the Department Advisor.

Physics Courses (PHYS)

Classes are offered in the semesters indicated. Please see the Schedule of Classes or the Department Web site at www.phys-astro.sonoma.edu for the most current information and faculty teaching assignments.

Grading Policy: All courses submitted toward major requirements in the Physics and Astronomy Department must be taken for a letter grade (A-F). This policy does not apply to courses challenged or offered only on a Cr/NC basis.

100 Descriptive Physics (3) Fall, Spring

Lecture, 3 hours. A descriptive survey of the important principles of physics. Not recommended for BS students. Satisfies GE, category B1 or B3. Prerequisite for chemistry, physics, or mathematics majors: Physics and Astronomy Department approval.

102 Descriptive Physics Laboratory (1) Spring

Laboratory, 3 hours. Experimental demonstrations, exercises, and field trips illustrating the methods by which physicists have learned what they claim to know about the world. Instruction is at the PHYS 100 level. Satisfies GE, category B1 or B3, and GE laboratory requirements. Prerequisite: previous or concurrent enrollment in PHYS 100 or ASTR 100, or consent of instructor.

114 Introduction to Physics I (4) Fall, Spring

Lecture, 4 hours. The first of three basic sequential courses in physics for science and mathematics majors. Introduction to vectors; classical mechanics, including particle dynamics and fluid mechanics; simple harmonic motion; thermodynamics and kinetics. Satisfies GE, category B1 or B3. Prerequisite: MATH 161.

116 Introductory Laboratory Experience (1) Fall, Spring

Laboratory, 3 hours. Demonstrations and participatory experiments are used to increase the student's familiarity with gravitational, electromagnetic, and nuclear forces in nature. Applications include biological, geophysical, medical, and environmental phenomena. Satisfies GE, category B1 or B3, and GE laboratory requirements. Prerequisite: previous or concurrent enrollment in PHYS 114.

209AB General Physics Laboratory (1, 1) Fall, Spring

Laboratory, 3 hours. Laboratory experiments to accompany PHYS 210AB and develop the student's ability to perform measurements of physical phenomena and to increase their appreciation of the sense of the physical universe gained through experimentation. 209A satisfies GE, category B1 or B3, and GE laboratory requirements. Prerequisites: high school algebra and trigonometry and a high school physical science. For 209A: previous or concurrent enrollment in PHYS 210A. For 209B: 209A and previous or concurrent enrollment in 210B.

210AB General Physics (3, 3) Fall, Spring

Lecture, 3 hours. A basic course in physics for students majoring in biology, geology or preprofessional programs. Fundamentals of Newtonian mechanics, thermophysics, optics, electricity and magnetism, special relativity, and quantum physics. Registration by mathematics majors requires Physics and Astronomy Department approval. 210A satisfies GE, category B1 or B3 requirement. Prerequisites: high school algebra and trigonometry.

214 Introduction to Physics II (4) Fall, Spring

Lecture, 4 hours. The continuation of PHYS 114. Electrostatics, quasistatic fields and currents, magnetostatics; electromagnetic induction; waves; physical and geometric optics. Prerequisites: PHYS 114; previous or concurrent enrollment in MATH 211.

216 Introductory Laboratory (1) Fall, Spring

Laboratory, 3 hours. Selected experiments to increase the student's working physical knowledge of the natural world. Prerequisites: PHYS 114 and 116. Concurrent enrollment in PHYS 214 is strongly recommended.

230 Electronics I (Formerly PHYS 313) (3) Spring

An introduction to the basics of analog and digital electronics. Review of Kirchhoff's laws, Thevenin's and Norton's theorems. Electronic circuits modeling and analysis, diodes, transistors, filters, operational amplifiers, single and multi stage amplifiers; analysis and design of combinational and sequential digital circuits. Cross-listed as ES 230. Prerequisites: ES 220 & 221, or PHYS 214 & 216, or 210B & 209B, or consent of instructor. Must be taken concurrently with Electronics I Lab.

231 Electronics I Laboratory (Formerly PHYS 313L) (1) Spring

Laboratory, 3 hours. Laboratory work to accompany Electronics I. Computer assisted design of analog and digital circuits. Diodes, filters, transistors, oscillators, amplifiers, analog to digital and digital to analog conversion, combinational and sequential logic, programmable logic devices. Cross-listed as ES 231. Must be taken concurrently with Electronics I.

300 Physics of Music (3) Fall

Lecture, 3 hours. Introduction to physical principles encountered in the study of music; applicable laws of mechanics and acoustics; harmonic analysis; musical scales; sound production in musical instruments; elements of electronic music. Satisfies GE, category B3. Prerequisite: one course in physical science or consent of instructor.

314 Introduction to Physics III (4) Spring

Lecture, 4 hours. The continuation of PHYS 214. Special relativity; elementary quantum mechanics; the Bohr atom and deBroglie waves; the Schrödinger wave equation with applications to simple one-dimensional problems and to atomic structure; elementary nuclear physics; introduction to equilibrium statistical mechanics; the partition function; Boltzmann statistics. Prerequisites: PHYS 214; previous or concurrent enrollment in MATH 261.

320 Analytical Mechanics (3) Spring

Lecture, 3 hours. Principles of Newtonian mechanics. Relativistic dynamics. Introduction to Hamiltonian mechanics. Applications to central force problems and small vibrations. Prerequisites: PHYS 114, PHYS 325.

325 Introduction to Mathematical Physics (3) Fall

Lecture, 3 hours. Coordinate systems and vectors; vector calculus; series expansions; differential equations; orthonormal functions; matrices and tensors; eigenvalues, eigenvectors, and eigenfunctions; solutions of systems of linear equations; complex numbers, complex plane, polar forms; Fourier series and Fourier integrals; use of mathematical symbolic processing software. Prerequisites: PHYS 214 and MATH 261 or consent of instructor.

340 Light and Optics (3) Spring

Lecture, 3 hours. The quantum theory of light, coherence, interference, diffraction and polarization, masers, lasers, geometrical optics, spectroscopy. Prerequisite: PHYS 314 or 325.

342 Light and Color (3) Spring

Lecture, 3 hours. A descriptive, nonmathematical, but analytical treatment of the physical properties of light, the camera, telescope, microscope and laser; holography, mirages, rainbows and the blue sky; colors in flowers, gems and pigments; human and animal vision and visual perception. Satisfies GE, category B3. Prerequisite: any physical science course or consent of instructor.

366 Intermediate Experimental Physics (3) Fall

Lecture, 2 hours; laboratory, 3 hours. Selected topics in experimental quantum physics, photonics (including fiber optic systems and lasers), materials science (including scanning electron microscopy and atomic force microscopy), X-ray analysis, applied nuclear physics, medical physics, biophysics, and precision machining. Prerequisites: PHYS 314 and 216, or consent of instructor.

381 Computer Applications for Scientists (2) Spring

Lecture, 1 hour; laboratory, 3 hours. Applications in physics using a high-level programming language like FORTRAN or C. Numerical solutions to differential equations. Prerequisites: PHYS 114 and MATH 211.

395 Community Involvement Program (1-2)

CIP involves students in basic community problems related to physics and astronomy-performing such tasks as tutoring, reading to the blind, service to local, county and state agencies, and service as teacher aides to elementary schools. Students receive 1-2 units, depending on the specific task performed. Not more than 4 CIP units will be applicable to the physics major requirements. May be taken by petition only.

396 Selected Topics in Physics (1-3)

A course of lectures on a single topic or set of related topics not ordinarily covered in the physics curriculum. The course may be repeated for credit with a different topic. Prerequisite: consent of instructor.

413 Microprocessor Applications (3) Fall

Lecture, 3 hours. Review of digital logic and programmable logic devices. Microprocessor architecture and programming and instruction design; memory hierarchy and I/O interfaces, system design using microprocessors (data acquisition, motion control robotics and other applications). Prerequisite: ES 230/ PHYS 230, or consent of instructor. Must be taken concurrently with PHYS 413L.

413L Microprocessor Applications Laboratory (1) Fall

Laboratory work to accompany Physics 413. Microprocessor programming; analog port and sensors; motion control; interfacing microprocessors with computers (high level interfacing and programming); programmable logic devices; data bus and memory data handling. Prerequisite: same as PHYS 413. Must be taken concurrently with Phys 413.

430 Electricity and Magnetism (3) Spring

Lecture, 3 hours. Electrostatics; magnetostatics; electric currents; electromagnetic induction; electric and magnetic fields in matter; Maxwell's equations; retarded potentials; radiation reaction; light emission; simple scattering and antenna theory; properties of waveguides; relativistic formulation of electrodynamics; Fourier decomposition of fields. Prerequisites: PHYS 214, PHYS 325.

445 Photonics (3) Fall

Lecture, 3 hours. Gaussian beams; guided-wave optics; fiber optics; optical resonators; resonant cavities; laser oscillation and amplification; laser excitation; optical pumping; solid state, gas, dye, chemical, excimer and free electron lasers; semiconductor lasers; laser spectroscopy; fiber optic communication; photomultiplier and semiconductor radiation detectors including photoconductors, junction photodiodes; p-i-n diodes, avalanche photodiodes; detector noise. Prerequisite: PHYS 314 or consent of instructor.

450 Statistical Physics (2) Fall

Lecture, 2 hours. The laws of thermodynamics: Boltzmann, Bose, and Fermi statistics; applications. Prerequisite: PHYS 314.

460 Quantum Physics (3) Fall

Lecture, 3 hours. The Schrödinger equation; coordinate and momentum representation; harmonic oscillator; angular momentum and spin; Hilbert space; eigenvalues and eigenvectors; completeness relations; central potentials; hydrogen atom; scattering; perturbation theory; Dirac notation. Extensive use of a symbolic processing program. Prerequisites: PHYS 314 and 325.

466 Advanced Experimental Physics (3) Spring

Lecture 2 hours, laboratory 3 hours. Advanced topics in experimental quantum physics, photonics (including fiber optic systems and lasers), materials science (including scanning electron

microscopy and atomic force microscopy), X-ray analysis, applied nuclear physics, medical physics, and biophysics. Prerequisites: PHYS 366, or consent of instructor.

475 Physics of Semiconductor Devices (3) Spring

Lecture, 3 hours. Semiconductor materials, crystal structure and growth; energy bands and charge carriers, conductivity and mobility; metal-semiconductor and p-n junctions; p-n junction diodes; bipolar junction transistors; field-effect transistors; CCD's; photonic devices and integrated circuits. Projects in photolithography; conductivity and contact resistance measurements; I-V and C-V characteristics of diodes; characterization of transistors may be assigned. Prerequisite: PHYS 314 or consent of instructor.

492 Instructional Design Project (2) Fall, Spring

A directed project to develop at least one laboratory experiment and/or classroom activity that teaches basic concepts in undergraduate physics. Both written and oral presentations (including a demonstration of the experiment or activity) will be required. Prerequisite: Physics 214 and 216 or Physics 210B and 209B.

493 Senior Design Project (2) Fall, Spring

A directed project to develop either a working prototype or a detailed conceptual design for an operational laboratory device. Prerequisites: PHYS 230 and 231.

494 Physics Seminar (1) Fall, Spring

A series of lectures on topics of interest in physics, astronomy, and related fields. May be repeated for credit up to 3 units maximum. Prerequisite: consent of instructor.

495 Special Studies (1-4) Fall, Spring

The Physics and Astronomy Department encourages independent study and considers it to be an educational undertaking. Students wishing to enroll for special studies are required to submit proposals to their supervising faculty members that outline their projects and exhibit concrete plans for their successful completion.

497 Undergraduate Research in Physics (2)

Supervised research in an area of physics that is currently under investigation by one or more members of the Physics and Astronomy Department's faculty. This course may be repeated for up to 6 units of credit. Both written and oral presentations will be required. Prerequisites: Junior standing and consent of instructor.
